## DETAILED ACTION

### *Pending Claims*

The pending claims in the instant application are 24-39. The only independent claim is 24.

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 24-39 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The recitation of “pharmacologically active analogue, derivative or pro-drug thereof” does not adequately describe the materials used and/or how to make said materials that meet the limitations as described above.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 24-26 and 28-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gans et al. (U.S. Patent 5,648,389).

Gans et al. generically discloses a composition comprising erythromycin and caprylic acid in an amount of 0.1 to 30% by weight (see col. 2, lines 41-57) that may include other therapeutic agents in a dermatologically acceptable carrier (see col. 3, lines 26-45) that is topically applied (see Abstract and col. 2, lines 26-41) that is used in the treatment of dermatological conditions. Gans et al. does not specifically disclose the instant claimed invention.

Gans et al. does disclose that the materials are selected from functionally equivalent topical agents. Therefore it would have been obvious to one of ordinary skill in the art to use the materials taught by Gans et al. since the materials are functionally equivalent and it would have been within the purview of one skill in the art to select the materials of the instant claimed invention without undue experimentation.

Art Unit: 1616

since the materials are functionally equivalent in the absence of a factual showing to the contrary or a showing of unexpected results.
